TRUSTWAVE EMAIL CONTENT MANAGER (ECM)

COMPLIANCE AND POLICY MANAGEMENT FOR MICROSOFT EXCHANGE SERVER

Trustwave Email Content Manager (ECM) is a powerful, flexible and scalable tool for monitoring and enforcing email policies. Trustwave ECM simplifies compliance requirements by ensuring email, and all its contents (i.e. text, images, files) adhere to DLP and AUP requirements.

BENEFITS AND FEATURES

Simplify Compliance Requirements

Easily set and enforce a wide variety of policies. In addition to pre-set templates (HIPAA, SOX), rules can be customized based on virtually any message criteria: who (sender/receiver), what (keywords, viruses, message size, files, patterns); and how (block, delete, archive, notify). Trustwave ECM can also auto-archive, retrieve and store messages based on custom criteria.

DLP

Prevent accidental or malicious data loss with email monitoring and filtering, deep content inspection of attachments, fingerprint technology and lexical dictionaries that can manage distribution of sensitive content. If potential data loss is identified, restricted files can be quarantined and email notifications can be sent to users and managers.

Enterprise Scalability

The Trustwave Secure Email Gateway array/node architecture enables central policy management and reporting for seamless scalability from 200-20,000+ users. This architecture also supports the Microsoft Exchange high-availability model for essentially no downtime.

Low Total Cost of Ownership

Easy deployment, limitless scalability, minimal administration overhead, consolidated and centralized management along with detailed, centralized and clear reporting in one solution make Trustwave ECM one of the most cost effective internal email solutions available
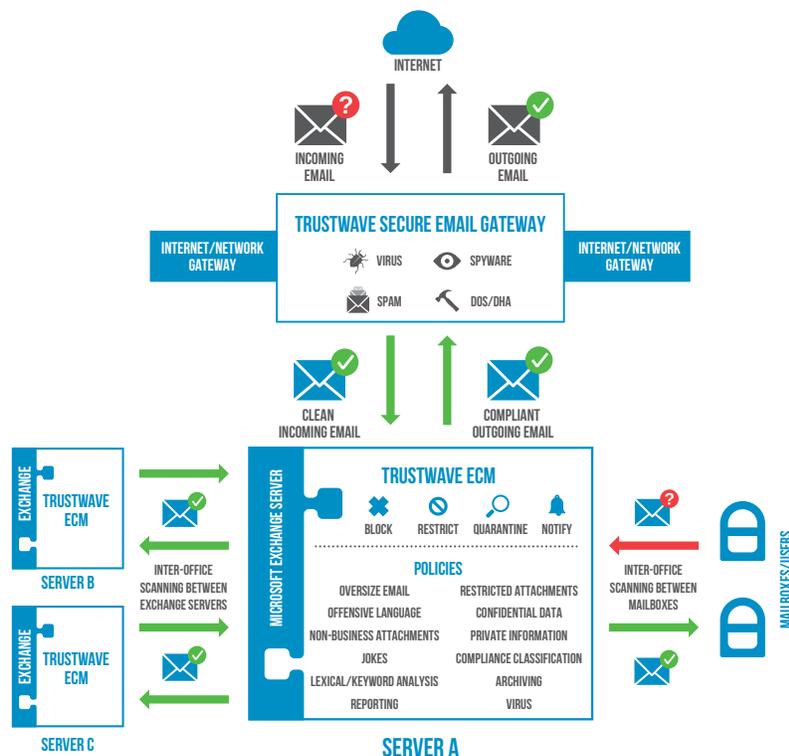

Optimize Network Efficiency and Improve Productivity

File size and bandwidth control help minimize non-business email, traffic and storage. These controls keep users on task and network bandwidth available for business-critical applications.

Reporting and Message Classification

Robust, centralized reporting set MailMarshal apart from other email solutions. The MailMarshal Reporting Console (MRC) includes several IT-friendly report templates including:

- Bandwidth Reports by sender, recipient, domain and file type
- Sort and Store messages based on content then recall stored messages for auditing
- Security Reports on attempted policy breaches and potential email abusers

Image Identification and Detection

Even images can be identified and mitigated if necessary. With deep image analysis, sophisticated body/facial recognition algorithms can recognize inappropriate images in attachments, including pornography.
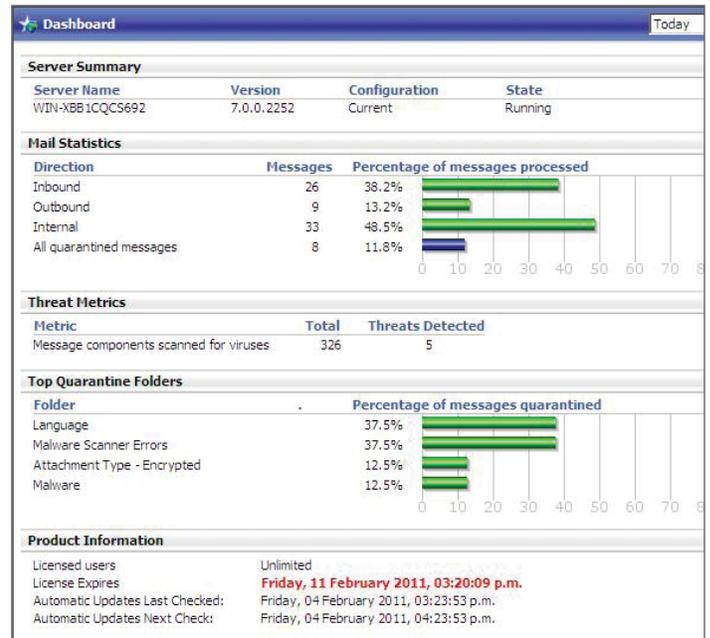

Compliance-friendly dashboard and reporting include numerous pre-set templates with drill-down capabilities.
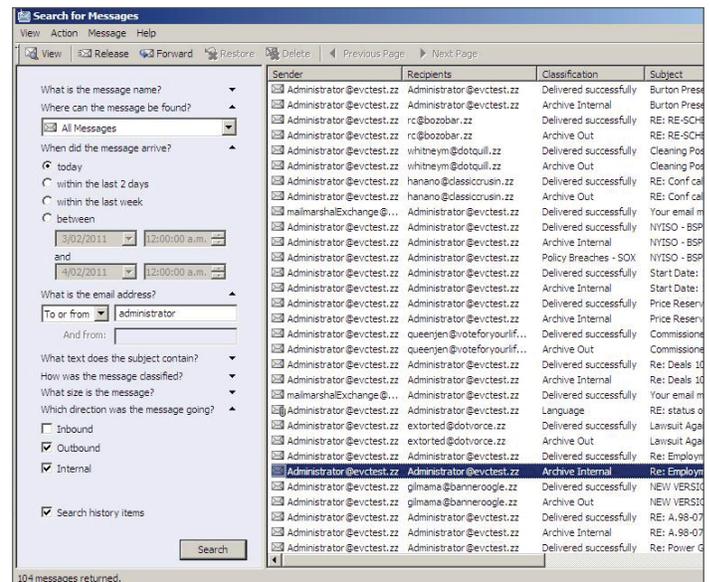

Robust categorization and storage features simplify message tracking, quarantine management and auditing requirements.
